## How do I display my schedule in Google Calendar or other calendar apps?

This can be done using the iCal link that the app provides. You would then subscribe to that link in Google Calendar:

1. Navigate to the app's settings > **Client Calendars**
2. On the first active tab (**iCal**) copy the link that is provided
3. Open Google Calendar (<https://calendar.google.com>)
4. Click the button with the three dots next to Add Calendar and select **From URL**
5. Enter the iCal link from the second step (for example <https://bobclass.com/ical/courtfour>)
6. After a few minutes, the appointments will be loaded and visible in Google Calendar.
7. You can enable or disable the visibility of this calendar in the left hand side panel in the Other calendars section.
8. Note that Google does not sync very frequently; changes may take up to a few hours!
